Dr. Natalia Chendei is a valuable member of the research team for the project 'STANCE STRATEGIES IN IMMIGRATION AND RACISM-RELATED DISCOURSE: ANALYSIS AND APPLICATIONS IN AFFECTIVE LEARNING PRACTICES (RACISMMAFF)'. Her participation is integral to achieving the project's objectives, notably by facilitating the incorporation of the Ukrainian language, which holds particular significance for the project's current goals.

RACISMMAFF builds upon previous research projects EUROVIDMOD, EVIDISPRAG, and STANCEDISC, aiming to enhance our understanding of how language users position themselves in discourse concerning immigration and refugee-related issues and racism. The project aims to positively influence discussions about immigration and racism among European Union students and future educators, thus impacting European society. This initiative is funded by the Spanish Ministry of Science and Innovation (MCIN) and is scheduled to run for an initial duration of three years until September 2025.
