Review

Object of review: Educational and scientific program
by specialty 292 International Economic Relations
fields of knowledge 29 International relations

Doctor of Philosophy qualification in international economic relations
Institution of higher education in which training is conducted according to the program:
State Higher Educational Institution "Uzhhorod National University"

The updated program of the third (educational-scientific) level of higher education presented for review contains an integrated complex of components aimed at training highly qualified and competitive in the scientific, educational and professional environment scientific and pedagogical personnel with the degree of Doctor of Philosophy in the field of knowledge 29 International relations, specialties 292 International economic relations. Candidates of the scientific degree PhD will be able to carry out independent scientific-research, scientific-pedagogical and practical-administrative activities in the fields of research of international economic relations and management of relevant subjects and institutions.

In comparison with the previous programs developed and approved by the university in 2016, 2019, 2020, which we randomly analysed, the reviewed document is distinguished by a detailed description of the mechanisms of educational, organizational, informational and advisory support for applicants for the degree of Doctor of Philosophy, the growth of components of free choice and research work, offered to graduate students. This gives the program variety, strengthens its ties with stakeholders of the education and science system and subjects of the knowledge economy, constitutes strengths and strengthens competitive advantages in the markets of educational, expert and managerial services. In terms of architecture and content, the Doctor of Philosophy Training Program in the field of international economics is quite comparable to similar ones in higher education institutions of United Kingdom and exceeds them in terms of duration, regulatory details and the number of mandatory components.

The educational-scientific program for PhD degree holders in the specialty 292 International Economic Relations contains a comprehensive and deeply professional approach to the training of PhD degree holders, and its implementation creates all the necessary prerequisites for obtaining the program result provided for by the National Standard and deep rethinking by doctoral students existing and creating new holistic scientific knowledge and professional practices.
